

GEL-TECHNIQUE

Long-term application
for underground, water,
indoor or outdoor!

Tested for
permanent
application!

IP 68

The Gel-Technique of GT is a system with special benefits.

It is quick and easy to mount and to reduce possible sources of error.

The specific Gel type GQ with optimize properties takes the function of sealing and insulating.

The specific designed double sealing prevents the blowing of the gel out of the shell, by concurrent adapted infilling of the grips volume.

Like other GT fittings are the straight joints and branch joints for low voltage checked after DIN EN 50 393, too.

Therefore the application in water, indoor, outdoor, in installation channels and in the underground are warranted.

Benefits

- For a permanent application in the underground, water, indoor, outdoor an in installation channels
- Saves, insults and seals in one process
- For all current insulating material
- For reopening
- Shell is produced with tough and impact resistant plastic material
- Easy mounting
- Gel – temperature resistance from -40°C until +140 °C
- Halogen-free
- UV resistant
- No fire
- No date of expiry
- No mixing required
- Mounting without special tools
- Checked after DIN EN 50 393
- Water resist at least 1 m deep
